EC327 - “Introduction to Software Engineering”

Lab 8 – Android Tutorial

Due: **Saturday April 5th, 11:59 pm**
Accept the assignment on GitHub Classroom:
https://classroom.github.com/a/ZSC84W2i

In this lab you will be given code for a functional tip calculator app. The most important files are:

- MainActivity.java
- Result.java
- main.xml
- result.xml
- strings.xml

To pass, you must add a few features and correct a handful of problems:

- Correct the spelling errors (hint look at the strings.xml file).
- Add a new 5% button to the .xml document and add a click listener for it.
- Reformat the .xml files to accommodate the new 5% button above the 10% button.

This lab is help you get familiar with the Android studio environment and help you to understand how the different files in an Android project interact. Good Luck!
